

Hi!

# Forma Library Web

Forms Library is based on Sketch nested symbols to power designers with starter kit to build easy and quick configurable Web forms with dropdowns.

Made by Amr Kamal, Hope you enjoy it!

# How to User's Guide

Hi, Thank you for downloading Forma Library, hope you enjoy it and throw back some useful feedback for the next versions.

## Overview

This library is based on Sketch with nested symbols so you can control everything from the overrides, It consists of wide variation of Form fields, Checkboxes, Radio Buttons and Dropdowns. It's smart, easy and matches most of the use cases. Also it's customizable in order to fit it in your design system.

## Fonts

All the fonts used are Roboto Family and you can download it here for free <https://fonts.google.com/specimen/Roboto>

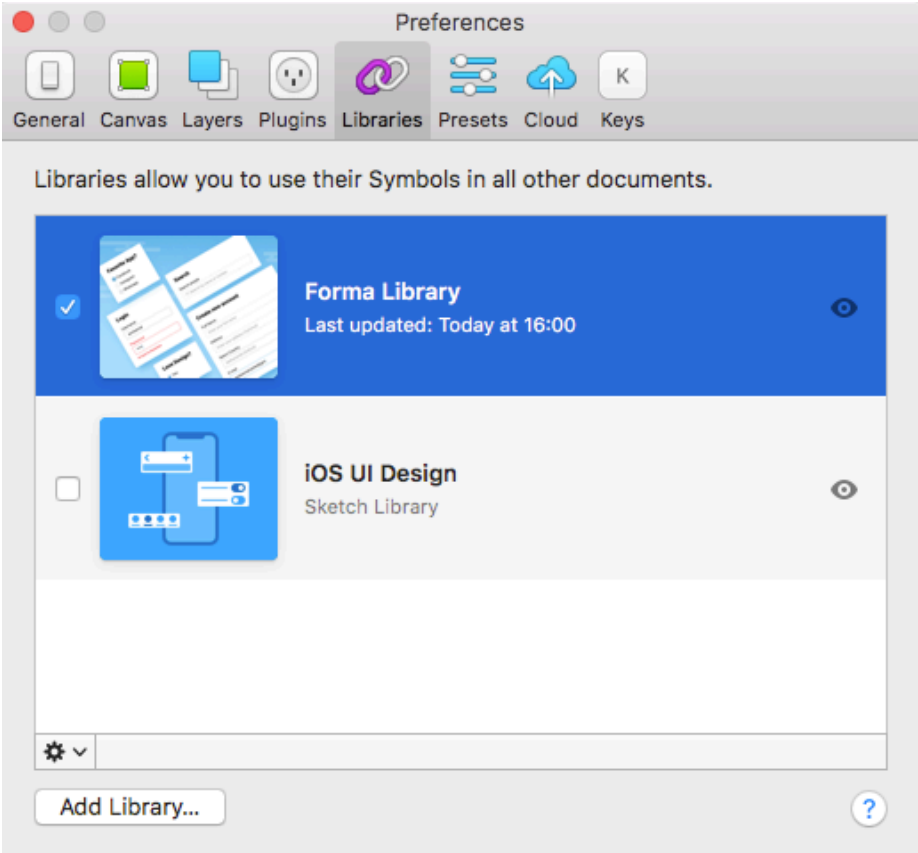

## Compatibility

This sketch file is compatible with the Sketch version 47 or later in order to use it as Library. If you have older versions you can update it to latest version or you can use it but you may experience some difficulties to copy and paste symbols. If you see anything weird please report it to me: [amrkamalrashed@gmail.com](mailto:amrkamalrashed@gmail.com)

## How to add it as Library

Using Sketch 47 or later, Open Sketch's Preferences (Command-Comma), and navigate to the Libraries tab.

To add your document as a Library, click on the "Add Library..." button that appears on the bottom right of the preference window, and choose your document from your files. You will now be able to insert its Symbols in any other document!

## Overrides Naming Convention

In order to make it visually easy for everyone to change overrides and keep in control, I use the following naming convention

Color

Text

Icon

Avoid

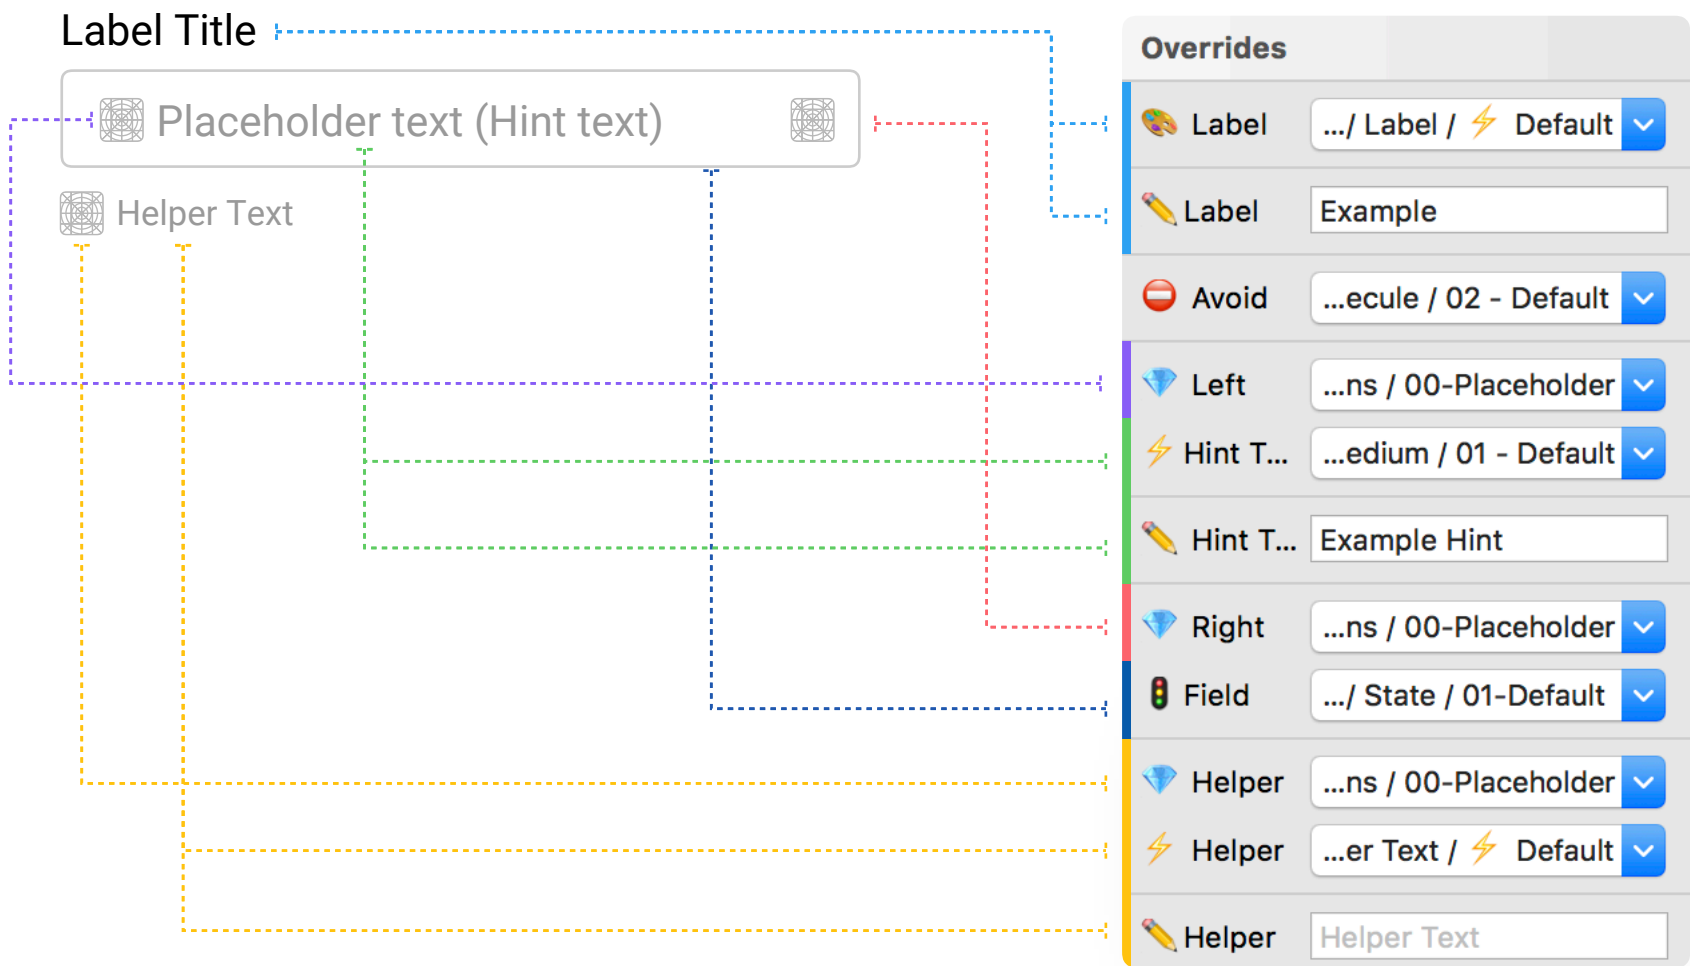

Text  
State

State

## Symbol Structure Overrides with Emojis

Breaking down the structure of the symbol with proper emoji's and titles to be easy for everyone to customize and change easily, you can always replace icons and colors to match your design system.

# Forma Library Web

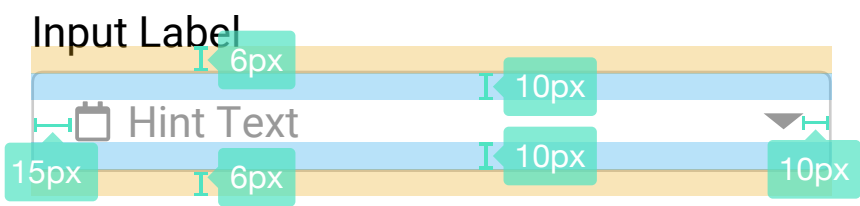

Forms Library is based on Sketch nested symbols to power designers with starter kit to build easy and quick configurable Web forms with dropdowns.

## Basic Layout

Text field labels display the type of input a field requires. Every text field should have a label.

Labels are aligned with the input text field and always visible.

Helper text gives context about a field’s input, such as how the input will be used.

Input Label  
Bottom padding: 6px

Placeholder text  
Top padding: 10px  
Bottom padding: 10px

\* Note that the Input field are created with the medium default size

## States

Default

Focused

Typi

Filled

Disabled

Success

Negative

## Sizes

You might want to use different sizes but all the symbols are created using the medium as default, if you want to use the field input without label use the below symbols and the full set will be provided in the next versions.

Large 52px

Medium (Default) 37px

Small 32px

## UX Best Practice

Fields are designed to cover 75% of the use cases based on some studies and recommendations that are published already through many articles on Medium.

Feel free to suggest more cases in order to update the Library!

# Sample Variations

Web

You can do many things with this library and here I'll be showing some examples with different variations to be able to imagine the library capabilities.
